5

Report of the Council.

In accordance with the constitution of the Society, the Council have to present to the Thirty-fifth Annual Meeting of the members a Report dealing with the financial and general condition of the Institute, and its progress during the past year.

Members.—The number of new members elected during the year has been rather smaller than usual, amounting to only 10. The names withdrawn from the roll have been 8; 3 from death, and 5 from resignation. This leaves a net gain of 2, the total number on the roll at the present time being 163. The members removed by death are Mr. W. S. Wilson; Bishop Cowie, who was President of the Institute in 1883, and who served on the Council for a considerable period; and Mrs. E. A. Mackenzie. The latter did not long survive her husband, whose decease was alluded to in the Report for 1900-1901, and whose many services to the Institute are still fresh in the memory of the members. The Council have pleasure in stating that the will of the lamented lady, drawn up in compliance with the wishes of her late husband, provides for a bequest of £2,500 to the Institute. Of this, the sum of £2,000 is to be invested by the Trustees, and the annual income regularly devoted to the purchase of scientific books for the Library. The remaining amount of £500 is to be expended by the executor under the will in such additions to the Museum as he in his sole discretion shall consider advisable.

Finance.—A full statement of the financial position of the Institute is contained in the balance-sheets appended to the Report, but the following brief synopsis will be useful. The total revenue of the Working Account, omitting the balance of £76 6s 6d in hand at the commencement of the year, has been £851 14s 8d, a satisfactory increase on the ordinary income of the previous year, which was £809 8s 10d. Examining the separate items, it will be seen that the receipts from the invested funds of the Costley Bequest have been £325 13s 9d, the amount for 1901-1902 being £365 8s 2d. The Museum Endowment has yielded in rents and interest £375

AIM Ann Report 1902 to 1903

6

15s 7d, the sum for the previous year being £309 10s. The members' subscriptions have amounted to £141 15s, being a gratifying advance on the amount collected during the last year. The total expenditure has been £868 2s 8d, leaving a balance of £59 18s 6d in the Bank of New Zealand. There is no change of importance with respect to the invested funds of the Institute, the total amount of which is £13,996 6s 2d, showing an increase of £108 7s 5d during the year. Practically the whole of this sum is invested in mortgage on freehold securities or in Government Debentures.

Museum Endowment.—No change of importance has taken place under this head. The interest on the various investments has been regularly paid, and from time to time the Crown Lands Board have handed over the rents received from those endowments that are leased. The Council regret that there are several small endowments, mostly situated in country townships, from which no revenue is being derived, and which are apparently unsaleable at the present time.

Meetings.—Nine meetings have been held during the year, the following papers being read:—

1. Presidential Address:—By the President, DR. E. ROBERTON.
2. On the Pollination of *Rhabdothamnus*:—By D. PETRIE.
3. Notes on a Visit to Tahiti:—By J. MARTIN.
4. Notes on the Maori Method of Catching certain Fish in the Piako River:—By CAPT. G. MAIR.
5. Chips from an Ancient Maori Workshop:—By CAPT. G. MAIR.
6. The Cultivation and Treatment of the Kumara by the Primitive Maoris:—By ARCHEDEACON WALSH.
7. Japanese Mediaevalism:—By the REV. W. GRAY DIXON.
8. A Flood of Gold:—By PROF. H. W. SEGAR.
9. The Food Products of Tuhoe Land:—By ELSDON BEST.
10. More Foot-tracks of Captain Cook:—By H. D. M. HAZARD.
11. Universal Equal Suffrage:—By E. E. VAILE.
12. Tennyson:—By PROF. C. W. EGERTON.
13. Nature's Efforts at Sanitation:—By R. H. MAKGILL, M.D.
14. New Species of New Zealand Grasses:—By PROF. E. HACKEL.

A selection from the above will appear in the next volume of "Transactions," now being sent to press.

AIM Ann Report 1902 to 1903

Museum.—The Museum has been open to the public throughout the year during the usual hours—from 10 a.m. to 5 p.m. on week-days, and from 2 to 5 p.m. on Sundays. From the register kept by the attendant on Sundays it appears that the total number of visitors on that day has been 12,656, or an average of 243 for each Sunday. The greatest attendance was 362 on July 6th; the smallest 91 on October 5th. On week-days the number of visitors varies considerably, according to the weather and other circumstances, but judging from occasional countings the daily average cannot be far from 100, making a total of 31,300, or of 43,956 for the whole year. Last year the number was estimated at 44,949.

The chief advance made by the Museum has been in the Ethnographical Department. The purchase of the Mair Collection by the subscriptions of the citizens of Auckland, particulars of which were given in last year's Report, naturally led to the re-arrangement of the whole of the Maori Collection. This work has occupied a good deal of time; but as a result the specimens are now arranged in a regular series, and are so displayed that they can be readily inspected by visitors to the Museum. Several noteworthy additions have been received during the year, the most important being a number of ancient burial chests, carved in a singular and antique manner, which were discovered in a burial cave at Waimamaku, near Hokianga. Through the kind offices of the Hon. Mr. Carroll, the Native Minister, the Maori owners have agreed to place these permanently in the Museum. Such articles are exceedingly rare, and are not represented in any other Museum in the Colony. Attention should also be drawn to an interesting series of bone and stone implements collected by Capt. G. Mair on the site of an old Maori workshop, laid bare by the drifting away of a sand-dune near Katikati Harbour, and which has been generously presented by its discoverer. It possesses a special value from the great antiquity of the articles. Important presentations have also been made by Mr. F. J. Williams, Mr. Elsdon Best, and others. Among foreign ethnographical specimens, the chief addition is a collection made on the island of Niue (or Savage Island), by Mr. Percy Smith.

The Council regret that they have been unable to proceed with the erection of the carved house Rangitiki, purchased for the Museum during the previous year. The estimated cost proves to be far more than could be defrayed out of the yearly income, and it would be imprudent to make any further calls on the invested funds of the Society. It has been suggested that the necessary funds for this purpose and for other expenditure required for the extension of the Maori portion of

AIM Ann Report 1902 to 1903

the collection might well be supplied by the Government, as a pound for pound subsidy equivalent to the amount subscribed by the citizens of Auckland for the purchase of the Mair Collection, and the Council have approached the Government on the matter. At a recent interview, the Premier expressed the fullest sympathy with the efforts that are being made by the Institute to provide a Maori Museum for Auckland, and the tenor of his remarks encourages the hope that a subsidy may appear on the Estimates for the coming year.

The progress of the Zoological Department of the Museum is necessarily slow, from the want of a resident taxidermist to prepare the specimens for exhibition. Until the funds of the Museum are sufficient to allow of the engagement of a competent workman, little more can be done than to keep in good condition the specimens at present exhibited, and to pack away all additions as they arrive. The Council regret that so far they have been unable to arrange for the preparation of the large groups of mammals intended to occupy the centre of the main hall—an addition which would greatly enhance the appearance of the Museum.

Library.—About 50 volumes have been added to the Library by purchase during the year. The usual exchanges and presentations from foreign Libraries and Institutions have been received, together with a few donations from private individuals. The scientific periodicals and magazines subscribed to by the Institute, a list of which appears in another part of the Report, have been regularly received, and to some extent circulated amongst the members. The importance of extending the Library, and of rendering it more useful to students and scientific workers, is fully recognised by the Council, and the increased funds which will be provided by the Mackechnie Bequest will enable them to make more frequent additions in the future.

Little Barrier Island.—The Institute still retains the management of the Little Barrier Island as a reserve for the preservation of the avifauna of New Zealand. The Curator reports that no attempts have been made to interfere with the birds, and that no unauthorised persons have landed upon the island. The Council are satisfied that if a resident guardian is maintained, the island will long remain a secure home for a considerable portion of the avifauna of New Zealand.

In conclusion, the Council invites the active assistance of the members in furthering the objects of the Institute, either by contributing papers to be read at the meetings, by adding to the Library and Museum, or in any other way. The Council also trust that the general public will afford that liberal support which is due to every public Museum and Library.
